

A special issue of **tripleC** journal, dedicated to E-CAP 2005

<http://triplec.uti.at/>

## **INTRODUCTION**

**Gordana Dodig-Crnkovic** and **Susan Stuart**, editors

## **PHILOSOPHY OF INFORMATION**

**Johansson**, Inference Rules, Emergent Wholes and Supervenient Properties

**Morado-Quiroz**, Some Assumptions about Problem Solving Representation in Turing's Model of Intelligence

## **COGNITIVE SCIENCE**

**Dougherty et al.**, The April Fool Turing Test

**Eriksson-Karlsson**, Approaching Artificial Intelligence for Games - the Turing Test revisited

**Harpur**, Philosophical lessons in autism for Artificial Intelligence

**Janlert**, Available information — preparatory note for a theory of information space

**Numerico**, Memory versus logic: two models of organizing information and their influences on web retrieval strategies

**Palmonari et al.** Commonsense Spatial Reasoning: an Informational Perspective from Pervasive Computing

**Schmidt**, Machinery, Intelligence and Our Intentionality. Grounds for Establishing Paradoxical Discourses

**Traiger**, The Cognitive Management of E-Testimony

**Vallverdu**, Choosing between different AI approaches? The scientific benefits of the confrontation, and the new collaborative era between humans and machines

## **ETHICS**

**Bardone-Magnani**, The Internet as a Moral Mediator. The Quest for Democracy

**Burk-Gillespie**, Autonomy and Morality in DRM and Anti-circumvention Law

**Larsson**, Expected Influence of Ethics on Product Development Process

**Pana**, Artificial Intelligence and Moral Intelligence

## **GENDER**

**Bath**, Overcoming the socio-technical divide: A long-term source of hope in feminist studies of computer science

**Bjorkman-Trojer**, What does it mean to Know Computer Science?

Perspectives from Gender Research

## **LEARNING**

**Rolf**, Testing Reasoning Software. A Bayesian Way

## **BIO**

**Battail**, Error-correcting codes and genetics

## **LINGUISTIC**

**Cote**, Information Structure Representation and Extraction from a corpus of Patient Data, using an Ontology.

**Sebillot**, Symbolic Machine Learning: A Different Answer to the Problem of the Acquisition of Lexical Knowledge from Corpora

**Shah**, A.L.I.C.E.- an ACE in Digitaland

## **ONTOLOGY**

**Dasmahapatra-Ohara**, Interpretations of Ontologies for Breast Cancer
